

River Water Cooler

River Water Cooler

The River is a water fountain that attaches to the mains water supply to provide consistently high-quality drinking water over prolonged periods, with only minimal maintenance.

The reliability of the River makes it ideally suited for use in public facilities, schools, manufacturing plants and on board ships.

River is now even more user-friendly thanks to the new front panel: facilitates maintenance and replacement of filter cartridges.

Performance

- Static condenser
- Robust and reliable
- Ventilated condenser
- Offers different levels of provision to cater to specific usage patterns
- Chills the water directly, without recourse to a reservoir, thus avoiding build-ups of water

Additional features

- Dose Counter
- Available in Grey, Beige or Stainless Steel
- Filters can easily be attached to improve the taste and aroma of the water dispensed

Dose Counter

This useful device counts the amount of water dispensed (total and partial "doses"), allowing for the constant monitoring of the volumes of water being used.
